

THE RIGHT SIZE

Why a longer bow?

Grouping

A longer bow improves lateral stability and grouping.

Comfort

A wider string angle gives better hook consistency.

Smoothness

Longer bows are smoother for a longer draw length.

If your draw length is 30" or more

Important: bow size is linked to your AMO draw length*: 66" to 70" bows for archers having a draw length in the range 27" to 29".
If your draw length is 30", 31" or more, a 72" or a 74" bow will give you better results.

The secret of our XL limbs

Thanks to our unique Carbon Monolith HM technology, providing unmatched torsion stiffness, lateral stability and lightness, it has made it possible to design XL limbs without sacrificing lateral stability or speed.

Recommended combination setup

AMO* draw length	bow	riser	limbs
27"	66"	25"	66"
28"	68"	25"	68"
29"	70"	25"	70"
30"	72"	27"	70"
31"	74"	27"	72" **

*AMO draw length= distance nock to plunger + 1.75"
**72" limbs are only available for Vx+ model
